2.88	Trailer rear convoy light(s) (6172h)	125

1 Scope

Part 3 of CANopen device profile for truck gateways defines the application objects for other than brake and running gear equipment. The normative references, definitions, acronyms, and abbreviations given in part 1 applies to this part, too.

1.1 Resolution, scaling and offset object definitions

The default values of the resolution_numerator, resolution_denominator minimum_value_range, maximum_value_range and offset objects may be defined in other standards and specifications. These values may be given in brackets for convenience, however, they shall be double-checked with the appropriate documents. The application object's Dimension may be also defined in other standards and specifications. The Dimension is given in brackets for convenience and shall be double-checked with the appropriate documents.

2 Objects for other than brake and running gear equipment

2.1 Rear obstacle distance (6100h); scaling and offset (6101h)

This object provides the actual distance between the back of the (towed) vehicle and any obstacle. (Dimension is cm).

2.10 Current gear (610Ch); scaling and offset (610Dh)

The gear currently engaged in the transmission or the last gear engaged while the transmission is in process of shifting to the new or selected gear. Transitions toward a destination gear will not be indicated. Once the selected gear has been engaged, the current gear will reflect that gear. (The value is dimensionless).

Note 1: Negative values are reverse gears, positive values are forward gears, zero is neutral

Note 2: 251 (FBh) is park
